

REMARKS

Claims 1, 3, 11 and 13 are rejected under 35 U.S.C. 102(e) as being anticipated by Takiara, US patent no. 6,253,114. Claims 1, 3-8, 11 and 13-18 are rejected under 35 U.S.C. 102(a) as being anticipated by Iida et al., European patent publication no. EP 1 128 366 A2. Claims 1, 3-5, 11 and 13-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Mau et al, US patent no. 6,469,967. These rejections are not applicable to the claims as amended.

Claims 1 and 11 include: the computer readable medium device storing functional descriptive material wherein data structures define structural and functional interrelationships between such data structures and the computer readable medium device, and wherein the program defines structural and functional interrelationships between the program and the computer readable medium device, whereby such interrelationships permit the data structures' functionality and the programs' functionality to be realized.

The PTO provides in MPEP §2131 that:

"[t]o anticipate a claim, the reference must teach every element of the claim."

Therefore, to support these rejections with respect to claims 1 and 11, the referenced patents must contain all of the above-claimed elements of the claim. However, the patents do not disclose the computer readable medium device storing functional descriptive material wherein data structures define structural and functional interrelationships between such data structures and the computer readable medium device, and wherein the program defines structural and functional interrelationships between the program and the computer readable medium device, whereby such interrelationships permit the data structures' functionality and the programs' functionality to be realized.

As a result, the previous rejections based on 35 U.S.C. §102(b) cannot be not supported by the referenced patents as applied to claims 1 and 11.

Claims 4-8 and 14-18 are rejected under 35 U.S.C. §103(a) as being unpatentable over Takiara, US patent no. 6,253,114 in view of Kondo et al, US patent no. 6,608,644. This rejection is not applicable to the claims as amended. Claims 4-8 and 14-18 depend,

respectively, from claims 1 and 11, and therefore are submitted to be allowable for at least these reasons.

As the PTO recognizes in MPEP §2142:

The Examiner bears the initial burden of factually supporting any *prima facie* conclusion of obviousness. If the examiner does not produce a *prima facie* case, the applicant is under no obligation to submit evidence of nonobviousness.

The USPTO clearly cannot establish a *prima facie* case of obviousness in connection with the amended claims for the following reasons.

35 U.S.C. §103(a) provides that:

[a] patent may not be obtained ... if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains ... (emphasis added)

Thus, when evaluating a claim for determining obviousness, all limitations of the claim must be evaluated. However, the references, alone, or in combination, do not teach the computer readable medium device storing functional descriptive material wherein data structures define structural and functional interrelationships between such data structures and the computer readable medium device, and wherein the program defines structural and functional interrelationships between the program and the computer readable medium device, whereby such interrelationships permit the data structures' functionality and the programs' functionality to be realized.

Therefore, it is impossible to render the subject matter of the claims as a whole obvious based on a single reference or any combination of the references, and the above explicit terms of the statute cannot be met. As a result, the USPTO's burden of factually supporting a *prima facie* case of obviousness clearly cannot be met with respect to the claims, and a rejection under 35 U.S.C. §103(a) is not applicable.

There is still another compelling, and mutually exclusive, reason why the references cannot be combined and applied to reject the claims under 35 U.S.C. §103(a).

The PTO also provides in MPEP §2142:

[T]he Examiner must step backward in time and into the shoes worn by the hypothetical "person of ordinary skill in the art" when the invention was unknown and just before it was made. In view of all factual information, the Examiner must then make a determination whether the claimed invention "as a whole" would have been obvious at that time to that person. ...[I]mpermissible hindsight must be avoided and the legal conclusion must be reached on the basis of the facts gleaned from the prior art.

Here, the references do not teach, or even suggest, the desirability of the combination because neither teaches nor suggests the computer readable medium device storing functional descriptive material wherein data structures define structural and functional interrelationships between such data structures and the computer readable medium device, and wherein the program defines structural and functional interrelationships between the program and the computer readable medium device, whereby such interrelationships permit the data structures' functionality and the programs' functionality to be realized.

Thus, neither of these references provides any incentive or motivation supporting the desirability of the combination. Therefore, there is simply no basis in the art for combining the references to support a 35 U.S.C. §103(a) rejection of the claims.

In this context, the MPEP further provides at §2143.01:

The mere fact that references can be combined or modified does not render the resultant combination obvious unless the prior art also suggests the desirability of the combination. (emphasis in original)

In the above context, the courts have repeatedly held that obviousness cannot be established by combining the teachings of the prior art to produce the claimed invention, absent some teaching, suggestion or incentive supporting the combination. In the present case it is clear that the USPTO's combination arises solely from hindsight based on the invention without any showing, suggestion, incentive or motivation in either reference for the combination as applied to the claims. Therefore, for this mutually exclusive reason, the USPTO's burden of factually supporting a *prima facie* case of obviousness clearly cannot be met with respect to the claims, and the rejection under 35 U.S.C. §103(a) is not applicable.

PATENT

Docket No.: 16356.849 (DC-03102A)

Customer No.: 000027683

In view of all of the above, the allowance of claims 1, 3-8, 11 and 13-18 is respectfully requested.

The Examiner is invited to call the undersigned at the below-listed telephone number if a telephone conference would expedite or aid the prosecution and examination of this application.

Respectfully submitted,

James R. Bell
